

SPECIAL FACILITIES AND PROGRAMS

Advanced Materials Characterization Laboratory

McNutt Hall and Straumanis Hall

F. Scott Miller (*Director*)

The Advanced Materials Characterization Laboratory was established in 2001 to provide advanced materials characterization instrumentation and expertise to UMR researchers as well as technological industries in Rolla and the state of Missouri. The laboratory combines advanced analytical resources from several departments on campus, as well as the Materials Research Center to provide a centralized point of contact for researchers.

The characterization equipment available in the AMCL includes: four scanning electron microscopes (SEM), and a transmission electron microscope (TEM), all of which are combined with energy dispersive x-ray spectroscopy (EDS) systems, three x-ray diffractometers, scanning tunneling and atomic force microscopes, auger electron and x-ray photoelectron spectrometers, and instruments for thermal analysis, including thermogravimetric analysis and differential scanning calorimetry. Training in these methods and assistance in the use of the equipment are provided to faculty researchers, graduate and undergraduate students by the director and staff of the AMCL. E-mail smiller@umr.edu or visit our website at campus.umr.edu/amcl.

Center for Aerospace Manufacturing Technologies

318 Engineering Research Lab

Ming C. Leu (*Director*)

Tim Comerford (*Assistant Director*)

Internet Home Page: <http://campus.umr.edu/camt/>

Faculty: J. Baird, R. Brow, K. Chandrashekhara, J. Choi, L. Dharani, F. Dogan, J. Drewniak, R. Dubroff, W. Fahrenholtz, G. Galecki, G. Hilmas, W. Huebner, M. Koledintseva, K. Krishnamurthy, M. Krogh, R. Landers, F. Liou, F. Miller, R. Mishra, S. Murray, J. Myers, S. Neal, J. Newkirk, M. O'Keefe, T. O'Keefe, D. Pommerenke, V. Richards, J. Sarangapani, C. Saygin, R. Schwartz, J. Stanley, J. Stoffer, D. Summers, H. Tsai, D. Van Aken, R. Zoughi.

The mission of the Center for Aerospace Manufacturing Technologies (CAMT) is to serve as a center of excellence to research, develop, evaluate and demonstrate new and optimal methodologies and tools for the rapid and cost-effective manufacture of aerospace components and products and to promote new education and training programs for the evolving aerospace manufacturing workforce, resulting in significant technological advancement and national economic impact.

CAMT was established in May 2004 at UMR in partnership with Boeing Phantom Works in St. Louis, Missouri through major funding from the Air Force

Research Laboratory in Dayton, Ohio, with the following objectives:

- Research, develop, evaluate, demonstrate and transfer advanced technologies of critical importance to the Air Force and the aerospace supply chain in the United States.
- Create knowledge, methodologies and tools to improve affordability, rapidity, quality, productivity, reliability, and safety in aerospace manufacturing.
- Disseminate the generated results to the aerospace supply chain through direct technology transfer as well as education, training and outreach activities.
- Serve as a role model of university-industry-government collaborative relationship.

CAMT involves thirty-seven faculty members and over sixty research staff and students from several academic disciplines including mechanical engineering, electrical engineering, metallurgical engineering, ceramic engineering, mining engineering, engineering management, and chemistry.

The ten Research Thrust Areas for CAMT are:

1. Advanced Simulation
2. High Speed Machining
3. Abrasive Slurry Cutting
4. Rapid Prototyping
5. Laser Materials Processing
6. Friction Stir Processing
7. Non-Chrome Coating
8. Non-Destructive Evaluation
9. Composites Manufacturing
10. Electronic Materials Processing

Center for Environmental Science and Technology

105 USBM Building

Virgil J. Flanigan, Ph.D.; P.E. (*Director*)

Senior Investigators: K. Chandrashekhara (*Mechanical Engineering*), D.E. Hagen (*Physics*), S. Kapila (*Chemistry*), J.W. Sheffield (*ME & AE*), P.D. Whitefield (*Chemistry*), Gerald Wilemski (*Physics*).

Research Investigators: N.L. Book (*Chemical Engineering*), N. Ercal (*Chemistry*), M.W. Fitch (*Civil Engineering*), D. Forciniti (*Chemical Engineering*), R. Frank (*Biological Sciences*), D.B. Manley (*Chemical Engineering*), P. Nam (*Chemistry*), B.R. Patterson (*Biological Sciences*), K.D. Peaslee (*Metallurgical Engineering*), C.W. Ramsay (*Metallurgical Engineering*), M.E. Schlesinger (*Metallurgical Engineering*), P.K. Terkonda (*Civil Engineering*), K.J. Westenberg (*Biological Sciences*).

The Center for Environmental Science and Technology (CEST) is an expression of commitment by the university to be a positive force in helping society deal with environmental problems and concerns. Its mission is to involve students in the resolution of real-world

environmental problems by enlisting them in research programs at UMR. To this end CEST fosters academic (students and faculty), industrial, and government laboratory participation in interdisciplinary environmental research. This multi-faceted program brings to bear new and existing technologies to the solution of environmental problems.

CEST may, therefore, be considered a catalyst for environmental research and teaching. It brings together under a common umbrella more than 25 faculty as senior investigators, research investigators, and adjunct investigators. Represented are more than a dozen engineering, physical science, life science, mining, and metallurgical disciplines. CEST also brings together a wide array of extraordinary laboratories and institutes. These have an impressive array of capabilities and unique expertise in cloud and aerosol sciences, materials research and recycling, environmental trace analysis, materials characterization, toxicology, coatings technology, environmental monitoring, and many other areas. To contact us e-mail CEST@umr.edu.

Center for Friction Stir Processing

234 McNutt Hall

Rajiv S. Mishra (Director)

The Center for Friction Stir Processing (C-FSP) was approved in Nov. 2002. From 2005, the center became a site for the National Science Foundation (NSF) Industry/University Cooperative Research Center (IUCRC) for Friction Stir Processing. The primary objective of the center is to enhance the science and technology of friction stir processes. Friction stir processing is the only solid state technology that is capable of producing wide-ranging microstructural modifications at localized regions of interest. Friction stir processing is an emerging technique based on the principles of friction stir welding (FSW). This relatively new joining process was developed initially for aluminum alloys, by The Welding Institute (TWI) of the UK. It is a solid-state joining method that is energy efficient, environmentally friendly, and versatile. It is considered by many to be the most significant development in metal joining in a decade. Several new concepts have been developed in the last few years to broaden the impact of friction stir technologies. These concepts make friction stir processing a generic tool for localized microstructural modification and manufacturing. The key technological areas are:

- Friction stir welding
- Friction stir processing for superplasticity
- Friction stir casting modification
- Friction stir microforming
- Friction stir powder processing
- Friction stir channeling

The C-FSP has state-of art facilities that include a three-axis friction stir machine, a six-axis robotic friction stir machine and a friction stir spot welding machine. E-mail rsmishra@umr.edu or visit our web site www.umn.edu/~fricstir or www.umn.edu/~fspicrc.

Center for Infrastructure Engineering Studies (CIES)

223 Engineering Research Laboratory

Genda Chen(Director);

Staff: Jason Cox (Senior Research Specialist); Cheryl Geisler (Secretary); Travis Hernandez (Research/Laboratory Technician); Rebekah Massmann (Editorial Assistant II); Gayle Spitzmiller (Administrative Assistant); Abigayle Sherman (Senior Secretary); Nestore Galati (Research Scholar) Dongming Yan (Research Scholar).

Researchers: Ashraf Ayoub (CArE); Genda Chen (CArE); John J. Myers (CArE); Steve Watkins (Electrical Engineering); Abdeldjelil Belarbi (CArE); Susan Murray (Engineering Management); Norbert Maerz (Rock Mechanics); Gregorz Galecki (Rock Mechanics); Paul Worsey (Rock Mechanics); Richard Stephenson (CArE); Jason Baird (Rock Mechanics); Chandrashekhara, K. (Mechanical and Aerospace Engineering); Neil Anderson (Geology/Geophysics); Thomas Petry (CArE); Richard Brow (Ceramics Engineering); Ronaldo Luna (CArE); Lokesh Dharani (Mechanical and Aerospace Engineering); Shamsheer Prakash (CArE); Roger LaBoube (CArE)

The Center for Infrastructure Engineering Studies (CIES) was created through the University of Missouri's Mission Enhancement Program at the Rolla campus. The center provides research expertise in the area of buildings and civil infrastructure and infrastructure management.

The mission of CIES is to provide leadership in research and education for solving the problems affecting the nation's infrastructure systems. CIES is the primary conduit for communication among those on the UMR campus interested in infrastructure studies. The center provides coordination for collaborative, interdisciplinary efforts with emphasis on:

Interdisciplinary research and development with projects tailored to address needs of federal agencies, state agencies, and private industry. Particular attention is devoted to addressing the needs of the State of Missouri. Undergraduate and graduate students are an integral part of the R&D efforts.

Technology transfer and continuing distance education to the engineering community and industry.

CIES is also the home of the University Transportation Center (UTC) which was established by the US Department of Transportation to advance technology and expertise in the many disciplines comprising transportation through the mechanisms of education, research, and technology transfer at university-based centers of excellence. The UMR UTC funds research proposals in the areas of advanced materials and non-destructive testing technologies with the objective of advancing the state-of-the-art of transportation structures. Three examples of such areas are: improvement of existing civil engineering construction materials, FRP composites, and non destructive testing.

The Natural Hazards Mitigation Institute (NHMI), also housed within CIES, is a multi-disciplinary program of research focused on evaluation of naturally-occurring phenomena and developing effective mitigation techniques utilizing new technologies and materials. NHMI draws on faculty expertise in civil and environmental engineering,

geology, seismology, geophysics, and geological engineering. Email: cies@umr.edu
 Websites: www.cies.umr.edu or www.utc.umr.edu;
 Phone: (573)341-4497

Cloud and Aerosol Sciences Laboratory

Norwood Hall

D. E. Hagen (Phys., Director); R. W. Alexander (Phys., Co-Director); D.J. Alofs (M&AE and EM); J.C. Carstens (Emeritus Prof. Phys.); N. Ercal (Chem); G. Gadbury (Math.); B.N. Hale (Phys.); S. Kapila (Chem.); U.O. Koylu (M&AE); P. Nam (Chem); J.L. Schmitt (Phys.); D.R. White (B.E.); P.D. Whitefield (Chem.); G. Wilemski (Phys.).

Global, regional, and local environmental concerns have propelled the atmospheric sciences to international prominence. Well known issues such as the local air quality, ozone, acid rain, photo-chemical smog, and global warming attest to the urgency of atmospherically related problems now facing society.

CASL is a multidisciplinary effort drawing on the solid base of engineering and sciences provided by UMR. Students from various academic departments perform their thesis research within the laboratory in partial fulfillment of the M.S. or Ph.D. degree requirements of their "home" department.

The program is directed toward a fundamental understanding of the role of aerosols, including clouds and fogs, in our atmospheric environment. Current studies focus on the generation and environmental impact of anthropogenic combustion aerosols, basic nucleation processes of water and ice, cluster structure both in the gaseous phase and on substrates, homogenous binary nucleation, neutron scattering measurements on nanodroplet aerosols, particle formation in supersonic expansions, and the heterogeneous chemistry and chemical composition of air borne aerosols and their impact on the atmosphere.

CASL provides leadership in international and national research programs. It is the home for the UMR-lead federal Center of Excellence for Aerospace Particulate Emissions Reduction Research, is a member of the FAA-NASA-Transport Canada Center of Excellence for Aviation Noise and Aircraft Emissions Mitigation, and leads the air related mission for the UMR Center for Emerging Contaminants. Its brief extends to particulate mitigation strategies for new combustor development.

The Laboratory houses a variety of instrumentation, much of it unique. This includes a finely tuned expansion chamber used to study nucleation phenomena, instrumentation designed to directly determine the chemical composition of particles on which droplets form, and an extensive mobile facility for both the on-ground and in-flight collection and analysis of combustion (e.g. jet exhaust) aerosols.

In addition to acquiring knowledge of cloud, aerosol, and atmospheric science, the laboratory imparts to students a familiarity with a wide variety of data acquisition, signal conditioning, and system engineering problems. Visit our website at and <http://www.umr.edu/umrcoe/>.

Cultural Programs

Cultural Programs promotes and supports diversity and cultural education within the University and Rolla community. Our mission is to educate UMR students about differences and similarities. We provide advocacy for African American, Native American, international and other minority groups, bringing people of all races together and facilitating their participation in campus organizations and programs such as Student Council and the Student Union Board. Various inter-cultural programs are provided for the student body in celebration of diversity.

In addition, Cultural Programs contributes to student retention and satisfaction of customers with high quality co-curricular opportunities and excellent customer service. Our goal is to be an active and visible partner in the campus and community. Furthermore, we provide safe, clean and affordable facilities for student and campus events. Cultural Programs are part of the Office of Student Life in the Havener Center. Visit our website at: <http://campus.umr.edu/culturalcenter/>.

Design Engineering Center: An Overview

Kenneth M. Ragsdell, (*Director*)

The Design Engineering Center is a unique industry, government, university research partnership. The purpose of the Center is twofold: to address the universal need for effective design and manufacturing methodology in support of efficient product development, and to provide quality educational opportunities to properly prepared and motivated students (undergraduate, graduate, and practicing engineers). The Center is a research activity in the Engineering Management and Systems Engineering Department. The current organization consists of a director, a number of graduate and undergraduate students, and participating faculty. Current areas of research include total quality management, concurrent engineering, Taguchi Methods®, quality engineering, six sigma and design for six sigma, the product development process, and design optimization. E-mail ragsdell@umr.edu or visit our website at <http://web.umr.edu/~design/>.

Distance and Continuing Education

216 University Center

This is a campus-based department which administers and coordinates a wide variety of credit and non-credit programs for UMR students and other audiences; local, national and international. Programming is available both live or on-line using the Internet and streaming video technology and provides access to programs at a time convenient to the users.

Credit courses can lead to a Certificate of Completion in a specific area of interest. Certificates can also serve as a way to qualify for subsequent admission to an appropriate Master's Degree program.

Credit courses are supplemented by a wide variety of activities and educational opportunities through non-credit short courses, conferences and technical seminars. Descriptions of currently available programs may be found on the web site at <http://dce.UMR.edu>.

For further information, contact

Distance and Continuing Education
University of Missouri-Rolla
216 University Center
1870 Miner Circle
Rolla, MO 65409-1560

FAX: (573-341-4992
e-mail: dce@umr.edu

Electronic Materials Applied Research Center (EMARC)

311 Materials Research Center

Harlan U. Anderson (Director)

Electronic Materials Applied Research Center (EMARC), a state/industry/university sponsored research program at UMR, is in its third year of developing new electronic materials technologies for the economic growth of industries in Missouri and throughout the nation. EMARC was formed through the support of the State of Missouri and the University of Missouri-Rolla due to an awareness of emerging technologies in piezoelectric sensors, actuators and emitters; fuel cells and oxygen permeable membranes; and thin film structures and devices.

The unifying theme for EMARC activities is the development of new ceramic and polymer materials and associated processing technologies for demanding applications where improved performance, yield, and reliability are desired. These activities build on the Center's core capabilities in molecular-level design and synthesis of materials, materials process, solid state materials analysis, and applications testing. EMARC also seeks to identify new areas where its R&D capabilities can be applied to industrial needs.

The Center is continually looking for ways to develop commercial applications from electronic materials and welcomes any inquiries you may have. Please contact Dr. Harlan U. Anderson, the Center's director, at (573) 341-4886 or by e-mail at emarc@umr.edu for additional information.

Energy Research and Development Center

Mariesa Crow (Director)

The University of Missouri-Rolla has a unique concentration of expertise providing a critical mass of research capability, which leads to innovative and sophisticated technological solutions to address a wide spectrum of energy issues. It is in the integration of innovative approaches to the solution of problems that UMR shines and can be of great service to Missouri and the nation in solving future energy needs. The Energy Research and Development Center's (<http://campus.UMR.edu/energyrd/>) mission focuses on increasing the

visibility of energy issues and enabling teams of university scientists and engineers, outside industrialists, and policy makers to prioritize, address and resolve key energy-related issues.

The University of Missouri-Rolla has numerous departments working on interdisciplinary energy-related research. General programmatic themes pursued in a diverse research portfolio follow:

- Advanced Exploration and Extraction Technology Development
- Advanced Technology for Refining and Transporting Energy
- Advanced Power Generation and Transmission Technology Development
- Renewable Energy, and Energy Conservation and Efficiency
- Environmental and Economic Policy Integration

These themes form the major research areas and frame significant energy-related issues. Sponsored research projects are funded from a variety of government and private sources. For more information, contact energyrd@umr.edu.

Environmental Research Center Butler Carlton Hall/201

341-6908

C.D. Adams (*Director*)

The mission of the Environmental Research Center for Emerging Contaminants (ERCEC) is to provide the infrastructure and coordinated faculty base to conduct wide range of large-scale federally-funded research initiatives designed to protect public health from emerging contaminants. ERCEC investigators conduct research sponsored by a wide range of entities including the NSF, USEPA, USDEd, USGS, Missouri Department of Natural Resources, American Water Works Association Research Foundation, as well as industry in Missouri and elsewhere.

Examples of current research areas in the ERCEC include: occurrence and control of antibiotics and antibiotic resistant bacteria at concentrated animal feed operations (CAFOs) and in drinking water; occurrence, fate and removal of estrogenic and endocrine disrupting chemicals in drinking water and wastewater treatment plants; reactions of indoor air pollutants in home and business environments; phytoremediation technology for treatment of organic contaminants in soil and groundwater; nutrient control using struvite precipitation; control of heavy metals with constructed wetlands; control of odor emissions from CAFOs; fate of mercury in incinerator flyash; treatment of MTBE and alternative fuel oxygenates; and transport of lead and zinc in Missouri rivers in the Old and New Lead Belts.

Laboratories associated with the Environmental Research Center maintain state-of-the-art instrumentation including: a wide variety of gas chromatographs with mass spectrometer and other detectors; high pressure liquid chromatographs with mass spectrometer and UV detectors; ion chromatograph; total organic carbon analyzer; atomic absorption spectrometers with

graphite furnace and flame combustion; inductively couple plasma mass spectrometer with laser ablation; a wide variety of ultraviolet and visible spectrophotometers; stopped flow spectrophotometer; molecular biology tools including polymerase chain reaction (PCR) instrumentation and denaturing gradient gel electrophoresis (DGGE) and clone libraries; microscopes; respirometers; and wide variety of other instruments. Specialized research equipment and facilities include temperature control rooms; a trailer-mounted experimental water treatment system; a trailer-mounted mobile air pollution analysis laboratory; a rooftop greenhouse; pilot-scale air stripping system; pilot-scale advanced oxidation and ozonation systems; laminar flow hoods; anaerobic microbiology facilities; and a variety of other research equipment. The original Environmental Research Center (ERC) was established in 1965. E-mail address is erc@umr.edu or visit the website at <http://campus.umn.edu/environ/index.html>.

Experimental Computation Laboratory

Computer Science (Room 342-C)

Bruce McMillin (*Director*)

The Experimental Computation Laboratory (ECL) is an organization dedicated to research in advanced methods of distributed and parallel computation. The current focus is on the use of rigorous mathematics through formal methods to create fault-tolerant and secure real-time distributed computing systems applied to critical infrastructure protection. Interdisciplinary research is the cornerstone for the success of the ECL.

Graduate and undergraduate students and faculty are supported by several grants from Air Force Office of Scientific Research and the National Science Foundation which utilize the ECL. E-mail us at ff@umn.edu or visit our website at <http://www.umn.edu/~ff/ecl.html>.

Experimental Mine

Bridge School Road

J.C. Tien (*faculty member responsible*)

The Experimental Mine, situated on Bridge School Road 1.5 miles from the main campus, consists of 25 acres of surface and underground facilities which provide excellent opportunities for mineral engineering teaching and research. The surface land includes several dolomite quarries. The underground workings consist of four shafts and 1,500 feet of single-level drifts.

This excellent teaching facility is equipped with a variety of mine-related equipment which offer practical hands-on experience in critical topics. This includes air compressors, rock drills, mucking machine, slusher and motor, diamond core drill, blasting seismography, extensometers, and surveying instruments. A complete ventilating fan system is connected to the underground area, appropriately installed for experimental data collection. The mine classroom has internet access and is equipped with an overhead projector, surround sound, and other teaching facilities.

Recent faculty and students research has been conducted in the areas of rock blasting, mine ventilation and atmospheric control, rock mechanics, and pipeline transportation. The quality of facilities is indicated by the frequency of requests for government and industrial use of the premises. Student projects, however, retain priority on this equipment and the working areas.

E-mail mining@umn.edu or visit our web site at <http://campus.umn.edu/mining/depexpmine.htm>.

Graduate Center for Materials Research

Straumanis Hall

James L. Drewniak (*Director*)

Senior Investigators: H.U. Anderson (MSE); R. Brow (MSE); F.D. Blum (Chem); D.E. Day (MSE); L.R. Dharani (M&AE); W.J. James (Chem); T. O'Keefe (MSE); J.O. Stoffer (Chem); J.A. Switzer (Chem); and D. Waddill (Phys)..

Research Investigators: M. Bertino (Phys); R.F. Brown (Bio Sci); D.R. Carroll (IDE); C. Chusuei (Chem); H.L. Collier (Chem); W.G. Fahrenholtz (MSE); G. Hilmas (MSE); E.E. Hoiness (Chem); S. Kim (Min & Nuc); A. Kumar (Min & Nuc); R.S. Mishra (MSE); F.S. Miller (MSE); J.W. Newkirk (MSE); M.J. O'Keefe (MSE); O.A. Pringle (Phys); M.N. Rahaman (MSE); M.E. Schlesinger (MSE); T. Schuman (Chem); J.D. Smith (MSE); D. Van Aken (MSE); M.R. Van De Mark (Chem); H. Xiao (ECE) and C.S. Kim (ECE & Bio Sci).

The Graduate Center for Materials Research was established for the purpose of multidisciplinary research on materials and to provide improved centralized laboratories and specialized equipment for faculty and students involved in materials research. The Center provides graduate students in many academic departments (e.g. Materials Science and Engineering, Chemical & Biological Engineering, Mechanical and Aerospace Engineering, Chemistry, Biological Sciences and Physics) with advanced training in materials related engineering and science research.

The research conducted in the Center ranges from fundamental science to applied engineering and includes the development, evaluation, application, and understanding of metals, polymers, biomaterials, electronic materials and composites.

Accomplishments from the Center include: glass microspheres for treatment of liver cancer, transparent composites for windows/armor, environmentally friendly corrosion coatings, laser glasses, epitaxial chiral surfaces, biomineralization, fuel cell electrolytes and sealing materials, electrochemical biosensors, mechanical properties of cell walls, multi-layer nanocapacitors, enhanced magnetic materials, and thin film electromagnetic probes.

The Center is located in Straumanis Hall, a four-story building with 30,000 square feet of laboratory and office space. The Center contains the modern equipment needed for research on materials development, characterization and evaluation, and for measuring common mechanical, thermal, electrical, and optical properties.

170 — Special Facilities and Programs

It contains specialize and adaptable experimental facilities for:

- Electrochemical characterization for deposition and corrosion
- Electronic materials
- Glass melting and processing
- Nanomaterials
- Plasma deposition of materials
- Biomaterials
- Composites
- Microfabrication including sputter deposition, evaporation, reactive ion etching and photolithography equipment
- Characterization of materials by x-ray diffraction, scanning and transmission electron microscopy, scanning tunneling and atomic force microscopy, thermal analysis, optical techniques, x-ray photoelectron and Auger electron spectroscopy.

The Center has an active interest in industrial research and economic development suitable for graduate and undergraduate student education and that falls within the technical expertise of the staff.

E-mail mrc@umr.edu or visit our website at <http://web.umr.edu/~mrc/>.

High Pressure Waterjet Laboratory

Rock Mechanics Facility

David A. Summers (*Director*), Grzegorz Galecki, and A. Curtis Elmore.

The High Pressure Waterjet Laboratory (HPWL) has been established as a separate group within the Rock Mechanics and Explosives Research Center (RMERC).

For over three decades UMR has built an international reputation in the area of high-pressure waterjet cutting and cleaning. During that time the technology has moved out of the laboratory and into industry with a broad band of applications. In the past, through contracts that have been awarded, faculty researchers in the RMERC have pursued many of these applications. The establishment of the waterjet laboratory as a separate substructure provides a focus for research activities in the waterjet field and recognizes UMR's leadership in waterjet research.

Fields to be encompassed within the laboratory include the areas of waterjet cutting, surface preparation of concrete and steel structures, accelerated cavitation studies, prevention of material erosion, processes supported by waterjet, two- and three-phase flow, the mechanism of fluid jet generation and the physics of high speed jet impact. high-pressure jet cutting; high-pressure jet cleaning; high-speed fluid cavitation; the mechanisms of surface erosion; two-phase fluid flow, including the addition of particulates to the jet stream; the mechanisms of fluid jet generation; multi-axis milling in mining and manufacturing; and the surface physics of fluid impact. Applications include mining, civil engineering, industrial and military uses.

The Laboratory serves as an inter-disciplinary campus research facility. State-of-the-art equipment

provides support to special needs of manufacturing, military and environmental industries.

E-mail dsummers@umr.edu or visit our website at <http://web.umr.edu/~waterjet/>.

Institute for Applied Chemistry and Nuclear Magnetic Resonance

Schrenk Hall

Frank D. Blum (*Director*)

The Institute for Applied Chemistry and Nuclear Magnetic Resonance was established by the Chemistry Department in 1990.

The purpose of this Institute is to provide a research group that can focus on problems relating to applied chemistry. In addition, the funding partially supports the operation of the Nuclear Magnetic Resonance (NMR) Laboratory, supervised by Dr. Frank Blum. The NMR instrumentation is multi-disciplinary and is used by many researchers on campus.

Members of the Institute include: Dr. F. Blum; Dr. R. G. Brow, Dr. H. Collier, Dr. L. Dharani, Dr. Dr. E. Hoiness, Dr. N. Leventis, Dr. P. Neogi, Dr. T. Schuman, Dr. O.C. Sitton, Dr. L. Sotiriou-Leventis, Dr. J. Switzer, Dr. T. Tokuhira, Dr. M. Van De Mark, Dr. K. Woelk.

The Institute promotes the study of chemical solutions to practical problems in the areas of polymers, coatings, solvents, surfactants, thin films, and environmental science. The specific interest is the behavior of polymers and biopolymers, coatings, composites, and conducting materials, as well as the discovery of new types of materials by use of chemical synthesis and novel techniques. The transport of molecules in colloidal and polymer systems is being studied by several researchers. The structure and dynamics of surfactant-based systems, including micelles, microemulsions, liquid crystals, and colloidal dispersions, are being studied as well. The development of chemical processing methods and the production of nano-scale and ceramic materials are also of interest.

Institute for Chemical and Metallurgical Process Development

Straumanis Hall

T.J. O'Keefe (*Director*)

The structure, properties, and performance of materials are influenced by the processes used during synthesis and fabrication. Development of the theoretical and practical requirements of these chemical and metallurgical processes are the focus of the institute. Drawing upon traditional hydro, pyro, and electrometallurgical processing operations, the institute investigates a wide range of materials that are of technological importance. Emphasis areas include, but are not limited to, electrochemical processing, corrosion, environmentally benign materials and processes, thin films and coatings, surface modification technologies, and

packaging materials. Characterization and analysis of materials and processes using advanced experimental and computational techniques and state of the art equipment are emphasized. E-mail address is: to-keefe@umr.edu.

Institute of Applied Mathematics

Rolla Building

Leon M. Hall (*Director*).

The Institute of Applied Mathematics brings together faculty and students from the Department of Mathematics and Statistics and other science and engineering departments to study applications of mathematics to a variety of scientific and technological problems. It provides educational opportunities and serves as a resource for the state in support of high-technology industrial development.

Research is conducted on both the graduate and undergraduate level. UMR's computer facilities provide support for research and give the campus state-of-the-art capabilities for doing experimental work in mathematics. E-mail address is mathstat@umr.edu.

Institute of River Studies Environmental Hydraulics and Hydrology

230 Butler-Carlton Civil Engineering Hall

C.D. Morris (*Director*)

Water and water-resources problems are often comprehensive in nature and their complexity is such that their resolution requires cooperative effort from individuals from a wide variety of academic backgrounds. The purpose of this institute is to encourage and to foster interdisciplinary team research directed toward resolution of the water and water-resources problems of Missouri and the nation.

The focus of institute activity is on the nation's natural waterways. In particular, the institute has a long record of research into problems related to major rivers in the midwest. The institute helps bring academics together with agencies, companies and industries to initiate research. The institute assists in assembling potential research collaborators and in preparation of proposals.

E-mail address is morris@umr.edu.

Intelligent Systems Center

320 Engineering Research Lab

Internet Home Page: <http://www.isc.umr.edu>

Ming C. Leu (*Director*)

Senior Research Investigators: M. Crow, F. Liou, and D. Wunsch.

Research Investigators: L. Acar, S. Agarwal, V. Allada, D. Belarbi, K. Chandrashekhara, B. Chowdhury, X. Du, D. Enke, C. Kim, R. Landers, X. Liu, S. Madria, B. McMillin, R. Mishra, A. Okafor, K. Peaslee, J. Sarangapani, S. Takai, D. Tauritz, H. Tsai, G. Venayagamoorthy, Y. Xing.

Affiliated Members: W. Al-Assadi, S. Ali, G. Bham, D. McAdams, M. Nelson, S. Sedigh, Y. Zheng.

Description of Center and Research Focus Areas:

The Intelligent Systems Center (ISC) mission is to provide an interdisciplinary research environment in which faculty from various departments can cooperate and conduct research on sponsored projects involving real physical systems with special emphasis on an intelligent (smart) systems approach. ISC has integrated its primary research mission with UMR's commitment to develop internationally recognized graduate research programs focused on key technologies.

The approaches for accomplishing ISC's objectives consist of (i) developing interdisciplinary research programs to match the emphasis areas of sponsoring agencies with the expertise of UMR faculty, (ii) obtaining long-term federal research grants and industrial contracts, and (iii) developing multidisciplinary research facilities.

ISC considers the education of graduate students as one of its major activities and provides graduate research assistantships through the Center's investigators. The students supported by research grants choose their thesis topics to be closely related to the grant. The interdisciplinary nature of research provides an excellent opportunity for the students to interact with students from other disciplines. The students also gain valuable experience in working as a team and acquire communication and project organization skills. The interaction between graduate students and program managers from industries and federal agencies is very helpful in the application of their research to real-world problems.

Multidisciplinary research teams consisting of faculty members and graduate students from the departments of interdisciplinary engineering, chemical and biological engineering, computer science, electrical and computer engineering, engineering management and systems engineering, mechanical and aerospace engineering, and material sciences and engineering have been established to conduct research in emerging technologies. The ISC has also developed state-of-the-art laboratories to conduct research on virtual reality, smart structures, neural networks, energy systems, agile manufacturing and automatic inspection, MEMS, robotics, and structural health monitoring. The Center provides advanced computing facilities (hardware and software) to its research investigators and graduate students working on research projects. Active research is in progress in the following interdisciplinary research areas:

1. Intelligent Manufacturing Processes and Systems
 - 1.1 Virtual and Rapid Prototyping & Manufacturing
 - 1.2 Laser Based Deposition & Prototyping
 - 1.3 Laser Micromachining
 - 1.4 Friction Stir Processing
 - 1.5 Composite Manufacturing
 - 1.6 Liquid Metal Processing
 - 1.7 Machining, Structural Health Monitoring & NDE

172 — Special Facilities and Programs

- 1.8 Integrated & Collaborative Design & Manufacturing
2. Integrated Control and Monitoring of Energy Systems
 - 2.1 Reliability and Security of Power Systems
 - 2.2 Power Electronics and Distributed Generation
 - 2.3 Fuel Cells
3. Advanced Simulation, Sensing and Control
 - 3.1 MEMS and Nanosensors
 - 3.2 Wireless Sensor Networks
 - 3.3 Intelligent and Adaptive Control
 - 3.4 Virtual Reality and Advanced Simulation
4. Computational Intelligence and Embedded Systems
 - 4.1 Data Processing, Fusion and Management
 - 4.2 System Design and System Support
 - 4.3 Trustworthy and Embedded Hybrid Systems

International Affairs

103 Norwood

Jeanie Hofer (*Director of International Affairs*)

The Office of International Affairs (IA) coordinates international activities, administers all matters involving immigration for international students and scholars and provides advisement services to the University's international population.

The International Affairs Office is responsible for the recruitment of international students and serves as a direct contact with U.S. government agencies, embassies, consulates, and the private sector concerning international activities. The office serves as the campus home for international student exchange programs and the majority of study abroad programs (see section on Study Abroad Programs). In addition, the Office assists faculty wishing to travel or work overseas, and offers educational and training programs, both domestically and abroad.

International Affairs coordinates and administers UMR's Applied Language Institute which houses the Intensive English Program. The Office of International Affairs is responsible for the organization of international protocol activities, and monitors the status of UMR international linkage agreements.

International Student Sponsored Student Program

A full range of services for sponsored international students is provided through the Office of International Affairs. International students sponsored by international agencies receive special services and pay \$250 per semester administrative fees. Individual students desiring to take advantage of these special services may apply for them.

Details on the current sponsored student program and costs are available upon request from the Office of International Affairs, 103 Norwood Hall, Rolla, Missouri 65409-0160.

Mandatory Health Insurance for International Students

As a condition of their enrollment all international students and scholars are required to purchase UMR

international student health insurance. This includes all F-1 and J-1 visa holders. In addition, the J-2 dependents of the J-1 visa holders are required to maintain the UMR international student health insurance. Student premiums are charged to the student's Cashier's account.

For more information on the mandatory health insurance requirement, contact the Office of International Affairs, 103 Norwood Hall, 573-341-4208.

Study Abroad Programs

The Office of International Affairs coordinates study abroad opportunities for UMR students. Students may choose from a variety of exchange programs. Credit toward the student's UMR degree program may be awarded for study abroad experience, with pre-approval. Some scholarships are available. The following provides a sample listing of institutions with which UMR has current study abroad agreements:

- Western Australian School of Mines (Australia)
- University of New South Wales (Australia)
- Hautes Etudes Commerciales Liege (Belgium)
- Harbin University of Technology (China)
- Provinciale Hogeschool Limburg (The Netherlands)
- Satakunta Polytechnic (Finland)
- Fachhochschule Aachen (Germany)
- University of the Western Cape (South Africa)

Intensive English Program (IEP)

The Intensive English Program (IEP) at the University of Missouri-Rolla provides intensive instruction in the English language for international students whose proficiency in the language is insufficient for admission into course work at the University.

The IEP offers 20 hours of non-credit course work per week in all aspects of language learning - pronunciation, reading comprehension, vocabulary development, grammar, writing, listening comprehension, speaking interaction, and note-taking. The program provides instruction at four proficiency levels: Beginning English, General English, Introduction to Academic English, and English for Academic Purposes.

All international students who have not satisfied the University's language-proficiency requirements are required to complete IEP's assessment testing, which is comprised of four parts:

Michigan Test of English Language Proficiency (MTELP) A standardized test that evaluates abilities in grammar, reading comprehension, and vocabulary.

Test of Writing Proficiency (TWP) A locally developed test that evaluates abilities to write clear, well organized English based on nationally developed guidelines.

Oral Proficiency Evaluation (ORE) A locally developed test that evaluates abilities to speak English clearly based on nationally developed guidelines.

Test of Listening Proficiency (TLP) A locally developed test that evaluates abilities to understand spoken English, especially in a classroom setting.

Students who perform well on all tests may be approved immediately for academic course work at the University. Other students are enrolled in IEP course work and may then complete the series of tests again at

the end of the semester. Recommendations for promotion into a higher level of the IEP or for advancement into university course work are made by the IEP's academic coordinator based on student testing and faculty input.

Students who enroll in the IEP must complete that program to the satisfaction of its director and academic coordinator (i.e. satisfy all completion requirements) before being allowed to enroll full time in university course work. A student may enroll in a reduced university load (in conjunction with IEP course work) with the approval of both his/her academic department and the director of the IEP.

Ordinarily, the IEP is open only to students who intend to pursue study at UMR, and who have been conditionally admitted to the University. If space exists, international students already admitted to UMR and already taking course work may enroll in IEP courses to improve their English. In addition, international persons with no academic affiliation with the University may be considered for admittance for Intensive English Studies only. Testing fees and program costs can be obtained by contacting the number below.

For more information on the IEP, contact the Office of International Affairs (IA), 103 Norwood Hall, University of Missouri-Rolla, Rolla, MO 65409-0160. Phone: (573) 341-6328 Fax: (573) 341-6356. E-mail address is ia@umr.edu.

Laboratory for Atomic, Molecular and Optical Research Physics

Michael Schulz (*Director*)

The Laboratory for Atomic, Molecular and Optical Research is composed of UMR faculty members performing research in atomic molecular and optical physics. This scientific area is concerned with the few body problem, the structure of atoms and molecules and their interaction with each other, with electromagnetic fields, and with surfaces.

The laboratory provides an environment which enhances this research activity, and which fosters cooperation and collaboration. The laboratory also provides a structure for formal cooperative programs, group funding, and other collective scientific activities.

Basic studies in the atomic, molecular and optical sciences have made major contributions to many of the new technologies that exist today. Laboratory faculty and staff members continue to contribute to the development of advanced concepts in such wide ranging areas as femtosecond laser physics, atomic interaction dynamics for electron, positron, and ion impact, and atomic processes important in controlled nuclear fusion. E-mail schulz@umr.edu or visit our website at <http://campus.umr.edu/physics/lamor>.

Laboratory for Information Technology Evaluation

Bureau of Mines #1

Richard Hall (*Director*)

The Laboratory for Information Technology Evaluation (LITE) is a facility designed to support the prototyping and evaluation of advanced information technologies and new media systems, with a particular focus on interactive learning simulations. The lab includes a number of computer work stations, which include state of the art prototyping and new media development software, for LITE Graduate and Undergraduate research assistants, and a usability assessment station. The usability equipment allows for the dynamic recording of users' navigation through information systems, and simultaneous recording of users' facial expressions and audio protocol, via Morae usability software. The system is also capable of acquisition and analysis of physiological responses, using the Biopac system.

In addition, the lab includes a head mounted display for research with virtual environments. The system allows for a detailed qualitative and quantitative evaluation of the usability of a wide variety of software.

NASA UMR Center of Excellence for Aerospace Propulsion

Particulate Emissions Research (UMRCOE) Norwood Hall G-11

Prof. Philip D. Whitefield, (*Director*)

pwhite@umr.edu

The UMRCOE is a university/industry consortium coordinated by the University of Missouri – Rolla conducting critical research that is providing the tools to characterize, measure, and predict propulsion particulate emissions in current and future aircraft. These tools will be validated both in the field and in realistic laboratory test environments that integrate propulsion altitude cells with state-of-the-art diagnostic systems and numerical modeling, and will be used as much-needed consistent standards for current and future engine design by the U.S. and for characterizing the aircraft component of combustion emission in the assessment of local air quality in and around our airports

NASA FAA TC Center of Excellence for Noise and Emissions.

UMR is the lead university for emissions studies in the recently established NASA FAA TC Center of Excellence for Noise and Emissions. Our objectives are to characterize the emissions (both small particles and condensable gaseous species) from aircraft and airports through measurements, understanding and model the microphysical processes associated with particle formation, and determine the health effects of emissions. The characterization of emissions from aircraft and airports requires comprehensive measurement of small particles and condensable gaseous species. In fact, it requires measurement of both the emissions of individual airplanes as they contribute to the total aircraft segment

of the emissions budget of an airport, and the emissions at the fence line of the airport due to all airport operations. The major tasks of the COE are: 1: Analyze and Correlate Particle Concentration Data 2: Study quantifying emission indexes, 3: Develop Field Testing Data.

Natural Hazards Mitigation Institute

Neil Anderson, (*Director*)
nanders@umr.edu

The State of Missouri is subject to natural hazards that cause widespread damage to residential, corporate and public structures, and transportation facilities and other infrastructure. Natural hazards include earthquakes, floods, tornados, high velocity straight winds, forest fires, ground collapse, expansive soil failure, and dam and levee failure. Such hazards result in significant economic costs and even loss of life.

Many of these natural hazard events have common attributes:

- The onset of these disruptive natural forces occur within a short time frame, often with little immediate warning, threatening both lives and property.
- The widespread impact of the event extends over an area and its contents, whether people, domestic dwellings, transportation or civil infrastructure.
- The multiplicative influence of weaknesses in geology and soil stratigraphy can compound structural damage.
- The impact of man's activities can contribute to the problem or can impede access to the area, slowing the needed mitigation and remediation of damage.

The complex and multifaceted nature of these natural hazards, which nevertheless have a common central theme, requires a coordinated and multidisciplinary approach to develop a strategy to provide protection to people and vulnerable structures before an event, to minimize injury and damage during the event and to ease the requirements for remediation after it is over. This requires a deep understanding and awareness of the areas at risk, if mitigation, response and remediation procedures are to be effectively developed.

The UMR Natural Hazards Mitigation Institute (NHMI) is charged with mitigating and remediating the detrimental effects of natural hazards both within the State of Missouri and Nationally, through **research**, **public service** and **education**. More specifically, the UMR NHMI is charged with the following responsibilities:

- Conduct, lead, coordinate and otherwise facilitate interdisciplinary **research** in the broad area of natural hazards including likelihood of occurrence, cause, effects, mitigation and remediation.
- Provide and disseminate **public service** information regarding probability of natural hazard occurrences, their potential outcomes, and precautionary measures which can minimize detrimental effects of natural hazards.

- Prepare, sponsor, coordinate and otherwise facilitate the development and offering of **educational courses** (academic and training) in the broad area of natural hazards.

Office of Technology Commercialization and Economic Development University Center

Keith Strassner (*Director*)

The Office of Technology Commercialization and Economic Development (OTCED) serves as the focal point for entrepreneurship, economic development, technology transfer and technology commercialization within the University of Missouri-Rolla, and as such functions as a resource for the development, dissemination, and implementation of enabling discoveries to commercial partners. The OTCED provides the means for applying these practices by offering business development and technology commercialization assistance to University and business ventures. The Office actively brings together the organizations, resources, and processes that will efficiently develop the university's discoveries for the betterment of society and the University.

The OTCED offers university faculty and students what they need to transfer technologies and create a start-up business by bringing new technologies to the widest possible audience through the commercialization of these discoveries. Through its programs, services, and efforts, OTCED is laying the ground work for the creation of new products, new jobs, and new opportunities for America. To efficiently meet the needs of UMR for technology transfer and commercialization support, OTCED consists of a Technology Transfer Office (TTO) and the Center for Entrepreneurship & Outreach (CEO). Both groups work closely together and with the University of Missouri's Office of Research and Economic Development to provide responsive, professional service to our faculty, students and industry partners to facilitate the creation of wealth, jobs and opportunities for faculty, staff, students and business within the state of Missouri and the world.

The TTO provides technology transfer expertise for identifying high-value innovative research, assessment of the licensability of UMR research, and securing intellectual property protection (when appropriate) for those inventions. The professional staff works with the researcher and faculty to provide advice about technology transfer issues during the research activity and to assist in the invention disclosure process. The TTO also provides guidance on an effective patent and copyright strategy and handles all the implementation details. To effectively bring UMR's technology into commercial use, the TTO assists in the technical and market assessments and actively markets UMR's technologies to industry partners. As part of these activities the TTO will expand and improve the technology transfer process on campus to ensure responsiveness to faculty, open and transparent decision making, and industry friendly interaction

with potential licensees to ensure access to the public and support the University's strong commitment to economic development initiatives.

The CEO integrates the activities of faculty, students and inventors by linking with technology-based small businesses to create commercialization opportunities, offer short courses and seminars on entrepreneurship, showcase technologies to government and industry partners, and identify business issues that require public policy attention. Business assistance programs offered by CEO include the SBIR/STTR, MO PTAC, and University of Missouri Extension.

A start-up business has the potential to produce significant opportunities for the inventors, the University, and the community. Given the right circumstances a start-up company can bring a technology to market more quickly, increase the value of a technology to outside partner companies, and aid University research activities. CEO's professional staff provides proactive assistance in analyzing potential opportunities to form a start-up business with UMR's technology and encourage this interaction early in the disclosure process. In all cases, a new start-up business must make a compelling case to investors, inventors, business partners, and the University that it can attract funding and resources to achieve sustainable success. CEO's staff provides hands on business assistance and links to funding and people resources.

The Small Business Innovation Research and Small Business Technology Transfer Program (SBIR/STTR) is a unique partnership among the University of Missouri-Rolla, University of Missouri Extension and its partners to bring government research and development awards to the small business. The staff can help you seek out, apply for and win government SBIR awards. The SBIR program is designed to 1) stimulate technological innovation; 2) partner with small businesses to meet federal research and development needs; 3) encourage the participation of disadvantaged businesses and minority-owned firms in technological innovation; and 4) increase private sector commercialization derived from federal research and development funding. The program offers small technology-based companies the opportunity to obtain seed capital for research and development early in the innovation process.

Dealing with regulations and red tape can be frustrating. In fact, those obstacles often keep highly qualified suppliers from selling to the government. The Missouri Procurement Technical Assistance Centers assist businesses-including small, disadvantaged and women owned firms-in obtaining federal, state and local government contracts. Procurement specialists will help you in identifying opportunities and understanding the government contracting process so you can take advantage of government sales dollars.

University Missouri Extension provides research-based knowledge and problem-solving resources from the University of Missouri to citizens, communities and businesses at the local level. Specialists in each county center can assist you directly or put you in touch with statewide experts and resources to serve your needs.

The Business Development Program seeks to provide a seamless network of business support services that are proactive in anticipating needs, responsive to Missourians, effective in assistance and efficient in delivery to Missouri entrepreneurs and businesses, with outcomes that result in maximizing Missouri's economic viability, individual capacity, families, communities and environment.

For more information about technology and business development efforts at UMR, contact us at otced@umr.edu or visit our website, <http://ecodevo.umr.edu>.

Rock Mechanics and Explosives Research Center

Rock Mechanics Facility

Senior Research Investigators: David A. Summers (*Director*); Paul N. Worsey, Grzegorz Galecki, Norbert Maerz, Leslie Gertsch and Jason Baird.

The Rock Mechanics and Explosives Research Center, organized in 1964, brings together leading investigators from different disciplines to research static and dynamic rock mechanics, rock fragmentation and excavation, and explosives technology. The High Pressure Waterjet Laboratory of the Center has developed a world-renowned team of waterjet technology specialists. The Linear Rock Cutting Machine is one of only two such full-scale facilities operating in the U.S.; with an accompanying suite of full-scale Rotary Rock Cutting Machines, it provides world-class research capability in mechanical rock excavation.

Areas of current research capability are: mine design, strata control, rock stress measurement, centrifugal testing – simulation of stress in complex geological structures, properties of rock under confining pressures, similitude studies, rock mechanics and applied geology, dynamic rock mechanics, dynamic strain measurement, high-pressure waterjet rock cutting, constitutive properties of rocks, high-pressure waterjet long-wall mining of coal, deep mine problems, ultrasonic wave measurements in rock, dynamic creep in rock, wall breaking, cratering with explosives, fracture propagation in rock, explosives and blasting, explosive labeling and detection, rock penetration and disintegration for rapid excavation, coal mine roof stability, concrete cutting and scarifying with water, and waterjet cleaning. Center faculty work in the development of new methods and machines for excavation, and concurrently means to protect structures from blast and other methods of attack.

A substantial contract is currently held with the U.S. Navy for studies related to the demilitarization of military high explosives and rocket propellants; assessment of washout parameters using high pressure waterjets and analysis and treatment of the waste stream produced. Interdisciplinary scholars and researchers bring differing and unique views to problem solution in fields which benefit the area, state, nation and ultimately the world.

E-mail vsnelson@umr.edu or visit our website at <http://campus.UMR.edu/rockmech/>.

Student Diversity Programs/ Minority Engineering and Science Programs (SDP/MEP)

212 ERL

Sunnie Hughes - (Director)

asksdp@umr.edu

Jacques P. Fransaw (JP) - (Coordinator)

mep@umr.edu

The SDP/MEP is designed to promote and support underrepresented minority (African American, Hispanic American, and Native American) students who are pursuing science, technology, engineering, and mathematics degrees. MEP has a thirty plus year tradition, which has produced hundreds of industry leaders. Our comprehensive academic and student support programs provide students with organizations and events that then enhance communication, leadership, and professional abilities. MEP graduates are often sought after by many of the nations leading corporations and graduate schools.

UMR is also a member of the National Consortium for Graduate Degrees for Minorities in Engineering and Science, Inc. (GEM) http://was.nd.edu/gem/gemwebapp/gem_00_000.htm. To learn details about these opportunities contact: Director, Student Diversity Programs, 212 ERL, (573) 341-4212, or visit our website at sdp.UMR.edu.

The Moeller Writing Studio/Writing Across the Curriculum Program

113 Campus Support Facility

Dr. Kate Drowne (*Director*)

The Dr. Beverley Bowen Moeller Writing Studio is located in 113 Campus Support Facility. Professors and Graduate Teaching Assistants in any course may refer students to the Studio for help with writing in any field of study. The Moeller Writing Studio is staffed with undergraduate peer tutors who help students with general writing skills and with discipline-specific writing, such as proposals, technical memos, and laboratory reports. They see students both by appointment and on a drop-in basis. Tutors also maintain a collection of handbooks and other writing resources in both print and electronic media for students to consult. Open tutoring hours are posted early in the semester, and students can make tutoring appointments by phone or e-mail for a wide range of times. A Technical Editor is also on staff to serve graduate students' needs. Writing Tutors and the Technical Editor are available to students without charge.

The Center for Writing Technologies is located in 114 Campus Support Facility, connected to the Moeller Writing Studio. This is a Computer Learning Center

linked to the campus network and specially equipped with writing, editing, and desktop publishing software, and with printers, a scanner, and a Smart Board. It is used for classes and workshops, and is available for general student use during Writing Studio office and tutoring hours, when not being used for classes.

The primary purpose of the Moeller Writing Studio and the Center for Writing Technologies is to support Writing Across the Curriculum, UMR's program to improve students' writing abilities. In addition to required and elective writing courses in the English Department, all departments at UMR are developing writing emphasized courses to give students experience writing in their academic and professional fields.

For more information about Writing Across the Curriculum services and facilities, contact the Director of Writing Across the Curriculum, 113 Campus Support Facility, University of Missouri-Rolla, Rolla MO 65409; call (573) 341 4436; or e-mail wac@umr.edu.

UMR Engineering Education Center

Telecommunity Center Building University
of Missouri-St. Louis Campus

Victor Birman (*Director*)

The UMR Engineering Education Center, located on the UM-St. Louis campus, offers UMR courses and degrees to working engineers and scientists in the St. Louis area. The courses, offered in the evenings, are graduate credit courses, applicable to master of science or Ph.D. degrees. In addition, the Center offers graduate certificate programs. Most of the courses can also be taken by non-degree candidates for personal enhancement.

The MS may be earned in aerospace, civil, computer, electrical, manufacturing and mechanical engineering, information science and technology, and engineering management. Offerings may be expanded if warranted by interests and requirements of area students.

Requirements for the MS degree at the UMR Engineering Education Center are identical to those on the Rolla campus. Courses are taught by UMR faculty members, and by UMR-approved adjunct faculty (industrial research engineers and scientists).

The center was established in 1964, as a part of the continuing education programs at UMR. Over 2,600 engineers obtained M.S. degrees at the center. Further information can be obtained from the director, at One University Blvd., St. Louis, MO 63121, phone 314-516-5431. E-mail dbenenat@umr.edu. or visit our website at www.UMR.edu/~umreec.

Video Communications Center

G-8 Library

Ross Haselhorst (*Manager*)

The Video Communications Center offers a variety of video production services to the campus community. This is achieved through several specialized video-

equipped classrooms, teleconference rooms and a selection of recording and transmitting technologies.

For the student - especially those pursuing advanced degrees -- the VCC offers an array of communication tools for extending the traditional classroom and laboratory out into "the real world."

Services include:

- Multimedia classroom use for thesis defense and project presentation
- Tape, DVD or web-streaming video recording of the above
- Video teleconferencing for project presentation to sponsoring companies, for student organizations meeting between campuses, and for job interviews
- Conversion of video tapes to and from the several international formats so the tapes can be played in the US, or sent overseas
- Assistance in set up, capturing and converting research lab project videos for documentation and presentation
- Participation in advanced coursework carried over and stored on the Web for later access
- The opportunity to take courses "at a distance" while away from or after leaving UMR

For more information on these and other services, contact the Video Communications Center at (573) 341-4526; or e-mail vcc@umr.edu or visit our website at: <http://campus.umn.edu/vcc>.

Wei-Wen Yu Center for Cold-Formed Steel Structures Butler-Carlton Civil Engineering Hall

Wei-Wen Yu (*Founding Director*)

Roger A. LaBoube (*Director*)

To meet an ever-increasing demand for technical assistance from steel and construction industries and to create more economic designs and applications, the UMR Center for Cold-Formed Steel Structures (CCFSS) was established to provide an integrated approach for handling research, teaching, and technical services on cold-formed steel structures at the University of Missouri-Rolla. The Center brings together technical resources from universities, trade associations, research laboratories, steel producers, manufacturing companies, consulting engineers, building officials, governmental agencies, and others.

The Center is currently co-sponsored by the American Iron and Steel Institute, Metal Building Manufacturers Association, Metal Construction Association, Rack Manufacturers Institute, Steel Deck Institute, Steel Stud Manufacturers Association, and the University of Missouri-Rolla.

Since 1968 UMR has conducted numerous research projects on cold-formed steel structures. These projects have been supported by the American Iron and Steel Institute, National Science Foundation, the American Society of Civil Engineers, Metal Building Manufacturers Association, Metal Lath/Steel Framing Associa-

tion, the Steel Deck Institute, the Chromium Centre in South Africa, The Nickel Development Institute in Canada, the Specialty Steel Industry of the United States, and individual companies.

With regard to teaching, UMR is one of few universities to offer a graduate course on cold-formed steel structures. In addition to the regular course, UMR has regularly conducted short courses and international specialty conferences to provide continuing education programs for the engineering profession. Visit our website at www.umn.edu/~ccfss.

Women's Leadership Institute Women in Science and Engineering (WISE)

Cecilia Elmore, Director

The mission of the WLI/WISE program is to promote diversity and support the needs of female graduates entering our nation's engineering and science workforce, and to serve as an Educational and Professional Development Resource Center for all UMR students. The program provides a number of activities and programs for students to learn about leadership from the female perspective. Its goals encourage student involvement and strategic leadership in campus and community organizations through involvement in the following areas: Classes, Residential College Learning Communities, Guest Lecturers, Workshops, Scholarships, WISE, Student Organizations, Resource Center, Mentoring/networking programs, Social Activities.

For more information contact the WLI/WISE office at: 212 Engineering Research Lab, 573-341-7286, wli@umr.edu or wise@umr.edu or <http://wise.umn.edu>.
